
MICROBIOLOGICAL PROFILE

V18TM

Iodophor based disinfectant

V18 MICROBIOLOGICAL PROFILE

INTRODUCTION

V18 is a powerful iodophor based disinfectant.

V18 has a broad spectrum of activity. It is bactericidal, fungicidal and virucidal.

V18 is an authorised biocide, GB-2019-1179-02-02, NI-2019-1179-02-02. DEFRA approved.

V18 is recommended for use in all types of livestock housing and for foot and wheel baths.

V18 is designed for use as part of an effective cleaning and disinfection (hygiene) programme.

| | | |
|---|--------------------------|-----------------------------------|
| Effective in the presence of heavy organic soiling and low temperatures | Use after cleaning | |
| For use in foot trays | Powerful and fast acting | Colour coded to indicate activity |

V18 - EFFICACY SUMMARY

V18 has been tested and proven to be effective against a range of micro-organisms. European Standard (EN*) test methods were used to prove efficacy against bacteria, viruses and fungi.

The UKAS accredited Microbiology Laboratory at Evans Vanodine International plc. (Testing number 1108) performed tests with bacteria and fungi.

V18 has also been tested against Leptospira, Mycobacteria and viruses at independent expert laboratories using appropriate methods.

V18 is approved in the UK by the Department for Environment, Food and Rural Affairs (DEFRA), for disinfection where an approved product is required <https://www.gov.uk/guidance/get-your-disinfectant-approved-by-defra>. This approval is also mirrored in Northern Ireland and Ireland by DARDNI and DAERA respectively.

The following tables include information of relevant, applicable test methods, conditions, contact times and organisms.

*EN - European Norm

Published in the UK as BS EN by the British Standards Institution.

V18 MICROBIOLOGICAL PROFILE

SUMMARY OF TEST RESULTS AGAINST AVIAN PATHOGENS

| BACTERIAL TEST PROFILE | | | | | |
|-------------------------------|----------|-------------|-----------|------------------------|---------------------|
| ORGANISM | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| <i>Escherichia coli</i> | 1:100 | EN 1656 | 10 | 30 | High |
| <i>Pasteurella multocida</i> | 1:400 | | | | |
| <i>Proteus hauseri</i> | 1:200 | | | | |
| <i>Salmonella arizonae</i> | 1:100 | | | | |
| <i>Salmonella gallinarum</i> | 1:100 | | | | |
| <i>Salmonella infantis</i> | 1:400 | | | | Low |
| <i>Salmonella pullorum</i> | 1:200 | | | | High |
| <i>Salmonella typhimurium</i> | 1:200 | | | | |
| <i>Staphylococcus aureus</i> | 1:100 | | | | |
| <i>Mycobacterium avium</i> | 1:200 | EN 14204 | 10 | 5 | Low |
| <i>Proteus hauseri</i> | 1:100 | EN 14349 | 10 | 30 | High |
| | 1:400 | | | | Low |
| <i>Staphylococcus aureus</i> | 1:100 | | | | High |
| | 1:250 | | | | Low |
| <i>Proteus hauseri</i> | 1:400 | EN 16437 | 10 | 60 | 3g/l bovine albumin |

| VIRUS TEST PROFILE | | | | | |
|--|----------|-------------|-----------|------------------------|---------------|
| VIRUS | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| Avian Adenovirus | 1:33 | In-house | 25 | 30 | None |
| Infectious Bursal disease virus | 1:50 | In-house | 30 | 30 | High |
| Infectious Bronchitis virus | 1:55 | In-house | 4 | 120 | Yeast |
| Infectious Laryngotracheitis virus | 1:100 | In-house | 10 | 30 | None |
| Avian influenza virus Taiwan strain H6N1 | 1:145 | In-house | 4 | 30 | Yeast |
| Avian influenza virus H5N3 | 1:145 | In-house | 4 | 30 | Yeast |
| Avian influenza reassortant virus H3N2 | 1:200 | In-house | 4 | 30 | Organic |
| Newcastle Disease virus | 1:100 | DEFRA | 4 | 30 | 5% yeast |
| Turkey Rhinotracheitis virus | 1:100 | In-house | 10 | 30 | None |
| Avian Reovirus | 1:50 | In-house | 10 | 30 | None |

In-house tests use protocols specific for each virus.

V18 MICROBIOLOGICAL PROFILE

SUMMARY OF TEST RESULTS AGAINST BOVINE PATHOGENS

| BACTERIAL TEST PROFILE | | | | | |
|---|----------|-------------|-----------|------------------------|---------------------|
| ORGANISM | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| <i>Corynebacterium pseudotuberculosis</i> | 1:100 | EN 1656 | 10 | 30 | High |
| <i>Escherichia coli</i> | 1:100 | | | | |
| <i>Klebsiella aerogenes</i> | 1:200 | | | | |
| <i>Pseudomonas aeruginosa</i> | 1:100 | | | | |
| <i>Staphylococcus aureus</i> | 1:100 | | | | |
| <i>Pseudomonas aeruginosa</i> | 1:200 | EN 14349 | 10 | 30 | High |
| | 1:300 | | | | Low |
| <i>Staphylococcus aureus</i> | 1:100 | | | | High |
| | 1:250 | | | | Low |
| <i>Staphylococcus aureus</i> | 1:100 | EN 16437 | 10 | 240 | 3g/l bovine albumin |
| <i>Leptospira interrogans</i> | 1:200 | In-house | Room Temp | 2 | None |
| <i>Mycobacterium fortuitum</i> | 1:20 | DEFRA | 4 | 60 | 5% yeast |

| VIRUS TEST PROFILE | | | | | |
|---|----------|-------------|-----------|------------------------|------------------------|
| VIRUS | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| Bovine enterovirus | 1:100 | EN 14675 | 10 | 30 | Low |
| Foot and Mouth Disease Virus O1 British field strain 1860/UK167 | 1:550 | DEFRA | 4 | 30 | 1% Foetal bovine serum |
| Bovine rotavirus | 1:75 | In-house | 4 | 30 | Yeast |

V18 MICROBIOLOGICAL PROFILE

SUMMARY OF TEST RESULTS AGAINST PORCINE PATHOGENS

| BACTERIAL TEST PROFILE | | | | | |
|--|----------|-------------|-----------|------------------------|-------------------|
| ORGANISM | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| <i>Enterococcus hirae</i> | 1:100 | EN 1656 | 10 | 30 | High |
| <i>Escherichia coli</i> | 1:100 | | | | |
| <i>Pasteurella multocida</i> | 1:400 | | | | |
| <i>Pseudomonas aeruginosa</i> | 1:100 | | | | |
| <i>Salmonella enteritidis</i> | 1:200 | | | | |
| <i>Staphylococcus aureus</i> | 1:100 | | | | |
| <i>Streptococcus suis</i> | 1:200 | | | | |
| <i>Mycobacterium avium</i> | 1:200 | EN 14204 | 10 | 5 | Low |

| | 1:300 | | | | Low |
| <i>Staphylococcus aureus</i> | 1:100 | | | | High |
| | 1:250 | | | | Low |
| <i>Enterococcus hirae</i> | 1:100 | EN 16437 | 10 | 180 | 3g/l bovine serum |
| <i>Pseudomonas aeruginosa</i> | 1:100 | | | 60 | |
| <i>Staphylococcus aureus</i> | 1:100 | | | 240 | |
| FIELD ISOLATES | | | | | |
| <i>Actinobacillus pleuropneumoniae (App)</i> | 1:800 | EN 1656 | 10 | 30 | High |
| <i>Bordetella bronchiseptica</i> | 1:200 | | | | |
| <i>Brachyspira hyodysenteriae</i> | 1:200 | | | | |
| <i>Haemophilus parasuis (Hps)</i> | 1:100 | | | | |
| <i>Pasteurella multocida</i> | 1:400 | | | | |
| <i>Staphylococcus hyicus</i> | 1:100 | | | | |
| <i>Streptococcus suis</i> | 1:400 | | | | |

| VIRUS TEST PROFILE | | | | | |
|---|----------|-------------|--------------|------------------------|------------------------|
| VIRUS | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| PRRS Virus | 1:200 | In-house | Room Temp | 30 | None |
| African Swine Fever virus | 1:200 | In-house | 20 | 30 | Organic |
| Porcine Circovirus Type 2 | 1:100* | In-house | 10 | 30 | Organic |
| PED Virus | 1:200 | In-house | 4 | 60 | None |
| PED Virus | 1:200 | In-house | 25 | 15 | None |
| TGE Virus | 1:50 | In-house | Not Recorded | Not Recorded | Not Recorded |
| Suid herpesvirus (Aujeszky's) | 1:200 | EN 14675 | 10 | 30 | Low |
| Foot and Mouth Disease virus O1 British field strain 1860/UK167 | 1:550 | DEFRA | 4 | 30 | 1% Foetal bovine serum |
| Swine Vesicular Disease Virus | 1:100 | | 4 | 30 | None |
| Porcine rotavirus | 1:100 | In-house | Room Temp | 30 | None |

* V18 passed the virucidal effectiveness test according to the US EPA regulatory agencies as a greater than 3 log (10) reduction demonstrated.

V18 MICROBIOLOGICAL PROFILE

SUMMARY OF TEST RESULTS AGAINST HUMAN PATHOGENS

| BACTERIAL TEST PROFILE | | | | | |
|-------------------------------|----------|-------------|-----------|------------------------|---------------|
| ORGANISM | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| <i>Escherichia coli</i> | 1:100 | EN 1656 | 10 | 30 | High |
| <i>Pseudomonas aeruginosa</i> | 1:100 | | | | |
| <i>Salmonella enteritidis</i> | 1:200 | | | | |
| <i>Salmonella typhimurium</i> | 1:200 | | | | |
| <i>Shigella sonnei</i> | 1:100 | | | | |
| <i>Staphylococcus aureus</i> | 1:100 | | | | |
| <i>Streptococcus pyogenes</i> | 1:200 | | | | |
| <i>Pseudomonas aeruginosa</i> | 1:200 | EN 14349 | 10 | 30 | High |
| | 1:300 | | | | Low |
| <i>Staphylococcus aureus</i> | 1:100 | | | | High |
| | 1:250 | | | | Low |

SUMMARY OF TEST RESULTS AGAINST PATHOGENIC FUNGI

| FUNGI TEST PROFILE | | | | | |
|---|----------|-------------|-----------|------------------------|---------------|
| FUNGI | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| <i>Candida albicans</i> | 1:50 | EN 1657 | 10 | 30 | High |
| <i>Fusarium oxysporum f.sp. cubense</i> | 1:100 | | 20 | | |

SUMMARY OF TEST RESULTS AGAINST MISCELLANEOUS PATHOGENS

| BACTERIAL TEST PROFILE | | | | | |
|--------------------------------|----------|-------------|-----------|------------------------|---------------|
| ORGANISMS | DILUTION | TEST METHOD | TEMP (°C) | CONTACT TIME (MINUTES) | SOILING LEVEL |
| <i>Melissococcus plutonius</i> | 1:100 | EN 1656 | 10 | 30 | High |

V18 MICROBIOLOGICAL PROFILE

THE EFFECT OF CONTACT TIME AND TEMPERATURE ON BACTERICIDAL ACTIVITY

EN 1656 was carried out with 5 and 30 minute contact times, at a standard 10°C temperature and at 20°C and 30°C to determine the effect on the bactericidal dilution with a range of bacteria.

| BACTERIA | TEST TEMPERATURE (°C) | | | |
|-------------------------------|-----------------------|--------|--------|-------|
| | TIME | 10°C | 20°C | 30°C |
| <i>Enterococcus hirae</i> | 5 Minutes | 1:25 | 1:50 | 1:50 |
| | 30 Minutes | 1:100 | 1:100 | 1:100 |
| <i>Escherichia coli</i> | 5 Minutes | 1:50 | 1:100 | 1:100 |
| | 30 Minutes | 1:100 | 1:100 | 1:100 |
| <i>Proteus hauseri</i> | 5 Minutes | 1:200 | 1:100* | 1:200 |
| | 30 Minutes | 1:200 | 1:200 | 1:200 |
| <i>Pseudomonas aeruginosa</i> | 5 Minutes | 1:100 | 1:100 | 1:100 |
| | 30 Minutes | 1:100 | 1:100 | 1:100 |
| <i>Salmonella enterica</i> | 5 Minutes | 1:100 | 1:100 | 1:100 |
| | 30 Minutes | 1:200* | 1:100 | 1:100 |
| <i>Staphylococcus aureus</i> | 5 Minutes | 1:25 | 1:25 | 1:25 |
| | 30 Minutes | 1:100 | 1:100 | 1:100 |

The results indicate that the bactericidal dilution of V18 increases when the temperature is increased from 10°C to 20°C, when tested with a contact time of 5 minutes and only *Enterococcus hirae* and *Escherichia coli*. A further increase to 30°C had no additional effect.

The results indicate that the bactericidal dilution of V18 is not affected by temperature when tested with a contact time of 30 minutes.

V18 would need to be used at considerably higher concentrations if the contact time is reduced from 30 minutes to 5 minutes (based on the most resistant bacteria tested)

*Two unexpected results were obtained but are not considered to be significant.

V18 MICROBIOLOGICAL PROFILE

VETERINARY DISINFECTANT TEST METHODS

Veterinary disinfectants can be used in a variety of areas e.g. the breeding, husbandry, production, transport and disposal of all animals except when in the food chain following death and entry to the processing industry.

There are two types of laboratory test methods for livestock disinfectants, suspension and surface methods. Surface methods use different carriers depending on the application area. The inoculum is dried on the surface before testing. As a minimum for general hygiene purposes, products should be effective against bacteria and yeast. There are 3 different claims that can be made when virus tests are used either for full virucidal activity, limited spectrum virucidal activity or activity against enveloped viruses. It will depend on the viruses tested which claim can be applied.

The scope of veterinary EN test methods does not specify application of the product but does include disinfection by immersion and surface disinfection by wiping, spraying, foaming or other means. It does not include aerial disinfection.

The interfering substances used in EN test methods are described as low or high level soiling for disinfectants and as pre and post milking for teat disinfectants in veterinary test methods. They simulate levels of soiling encountered in practical, real-life situations.

EN TEST METHODS

| TEST REFERENCE | | TEST TYPE | ORGANISM | TEST PASS CRITERIA |
|----------------|---|------------|--------------|--------------------|
| EN 1656 | For bactericidal activity. | Suspension | Bacteria | ≥5 log reduction |
| EN 1657 | For fungicidal and/or yeasticidal activity. | Suspension | Fungi/Yeast | ≥4 log reduction |
| EN 14204 | For mycobacterial activity. | Suspension | Mycobacteria | ≥4 log reduction |
| EN 14349 | For bacterial activity on stainless steel carriers. | Surface | Bacteria | ≥4 log reduction |
| EN 14675 | For virucidal activity. | Suspension | Virus | ≥4 log reduction |
| EN 16437 | For bacterial activity on wood carriers. | Surface | Bacteria | ≥4 log reduction |

V18 MICROBIOLOGICAL PROFILE

LOG REDUCTION

Products claiming they will kill 99.9% of bacteria sounds extremely efficient, however it does not prove that a product is an effective disinfectant.

In order to demonstrate effectiveness, disinfectants should be tested using European Standard Test Methods. Depending on the applicable area and test used, relevant log reductions are specified and must be achieved to claim effectiveness with a test method. This means a reduction in microbial numbers must be seen when compared to the number of organisms at the start of the test or, for surface tests, to a water control performed at the same time. As the numbers are large it is generally accepted that they are expressed as a logarithm. The reduction can be written as either a log value or a percentage i.e. a 5 log reduction is equivalent to a 99.999% reduction, a 3 log reduction is equivalent to 99.9% reduction.

Bacteria are microscopic free living single celled organisms. A surface contaminated with raw meat for example could have millions of bacteria per square centimetre e.g. a surface with 1,000,000 bacteria treated with a product that kills 99.9% of bacteria would still have 1000 bacteria remaining. If the surface were treated with a product that kills 99.999% of bacteria only 10 bacteria would remain.

Bacterial growth rates vary depending on the surface, type and degree of soiling, temperature and presence of water. For example, E.coli under ideal conditions multiplies every 15 minutes. If conditions are less than ideal (lowering the temperature or drying the surface) the growth rate slows down. e.g. 1,000 bacteria would increase to 2,000 after 15 minutes, after 30 minutes it would be 4,000 and after 1 hour 16,000 and 256,000 after 2 hours, 10 bacteria would only have multiplied to 2560 in the same 2 hour period.

The presence of bacteria does not automatically lead to infection, susceptibility to disease and the infectious dose (number of bacteria required to cause infection) are vitally important. Some bacteria will cause an infection with less than 100 cells ingested or introduced into cuts or wounds. For this reason, it is important to reduce numbers of harmful bacteria to the lowest number possible wherever the risk of infection is high.

THE FOLLOWING FIGURES APPLY IF THE NUMBER AT THE START POINT WAS 1,000,000

| LOG REDUCTION | NUMBER REMAINING | PERCENTAGE REDUCTION |
|---------------|------------------|----------------------|
| 1 | 100,000 | 90% |
| 2 | 10,000 | 99% |
| 3 | 1,000 | 99.9% |
| 4 | 100 | 99.99% |
| 5 | 10 | 99.999% |
